

Poq Backend Tech Assessment - C# / .NET

Create a .NET Core solution to contain an HTTP endpoint that:

1. Accepts a GET request with three optional query parameters to filter products or highlight some words (separated by commas in the query parameter) in their description:

Example:

```
/filter?minprice=5&maxprice=20&size=medium&highlight=green,blue
```

2. Reads the list of all products from the URL (think of this as the database):
<http://www.mocky.io/v2/5e307edf3200005d00858b49>
3. Design the endpoint response so that it contains (in JSON format):
 - a. All products if the request has no parameters
 - b. A filtered subset of products if the request has filter parameters
 - c. A filter object to contain:
 - i. The minimum and the maximum price of all products in the source URL
 - ii. An array of strings to contain all sizes of all products in the source URL
 - iii. A string array of size ten to contain the most common words in all of the product descriptions, excluding the most common five
 - d. Add HTML tags to returned product descriptions in order to highlight the words provided in the *highlight* parameter.
Example: "These trousers make a perfect pair with **green** or **blue** shirts."

What we will look for

- That the project starts successfully (using https) when we run it
- Correctness of functionality
- Clean, readable, easy-to-understand code
- Performance, scalability, and security
- Unit tests
- Dependency injection
- Appropriate logging including the mocky.io response
- Documentation for the users of your API

Hints

- You do not need to implement authorization but look for other potential security vulnerabilities
- Feel free to use any open-source libraries
- Feel free to leave notes as code comments

How To Prepare

- You should only spend a few hours completing the assignment
- Have the solution ready to compile and run
- Avoid including artifacts (NuGet packages, bin folders) from your local build

How To Submit

- Please upload your assessment to the Google Drive folder shared with you and let us know when you are done.
